

ULV FOGGER

Battery Powered

Ultra Low Volume

- Cold Fogger
- Good for Water, Oil or Alcohol Based Formulations
- Droplet Size from 8-15 Microns
- Portable with Carry Handle
- Ideal for use in Disinfection, Pest Control and Odour Control applications

CODE: CLEF-16B

Model	F-16B Battery Powered
Battery	LITHIUM ION
Tank Size	1.2 Litres
Power	320 Watts
Spray Distance	Up to 8 Metres
Battery Life	Up to 32 mins. run time (dispenses approx. 6.4L per battery charge)
Charging Time	3 Hours
Unit Weight	Approx. 2.5kg
Housing	Strong Polypropylene Body
Comes with	Charger & Spare outlet

WHAT IS A ULV FOGGER?

The **XPOWER Ultra Low Volume (ULV) Fogger** is a cold fogging machine that uses large volumes of air at low pressure to transform liquid into droplets that are dispersed into the atmosphere. It can be used to disinfect large and often hard to reach areas in a very short time.

It works by generating a fog or mist formed of ULV droplets between 8-15 Microns (μm) in diameter that float in the air for several minutes after application, reaching the most inaccessible parts where conventional cleaning or spraying can't reach.

Depending on the chemical liquid formulation, they can be used to kill pathogenic microbes such as viruses, fungi and bacteria that are the main cause of airborne or direct contact diseases affecting humans and animals. Studies have shown the application of disinfectants via fogging significantly reduces the number of infectious pathogens in the immediate environment.
